

TR Band[®]

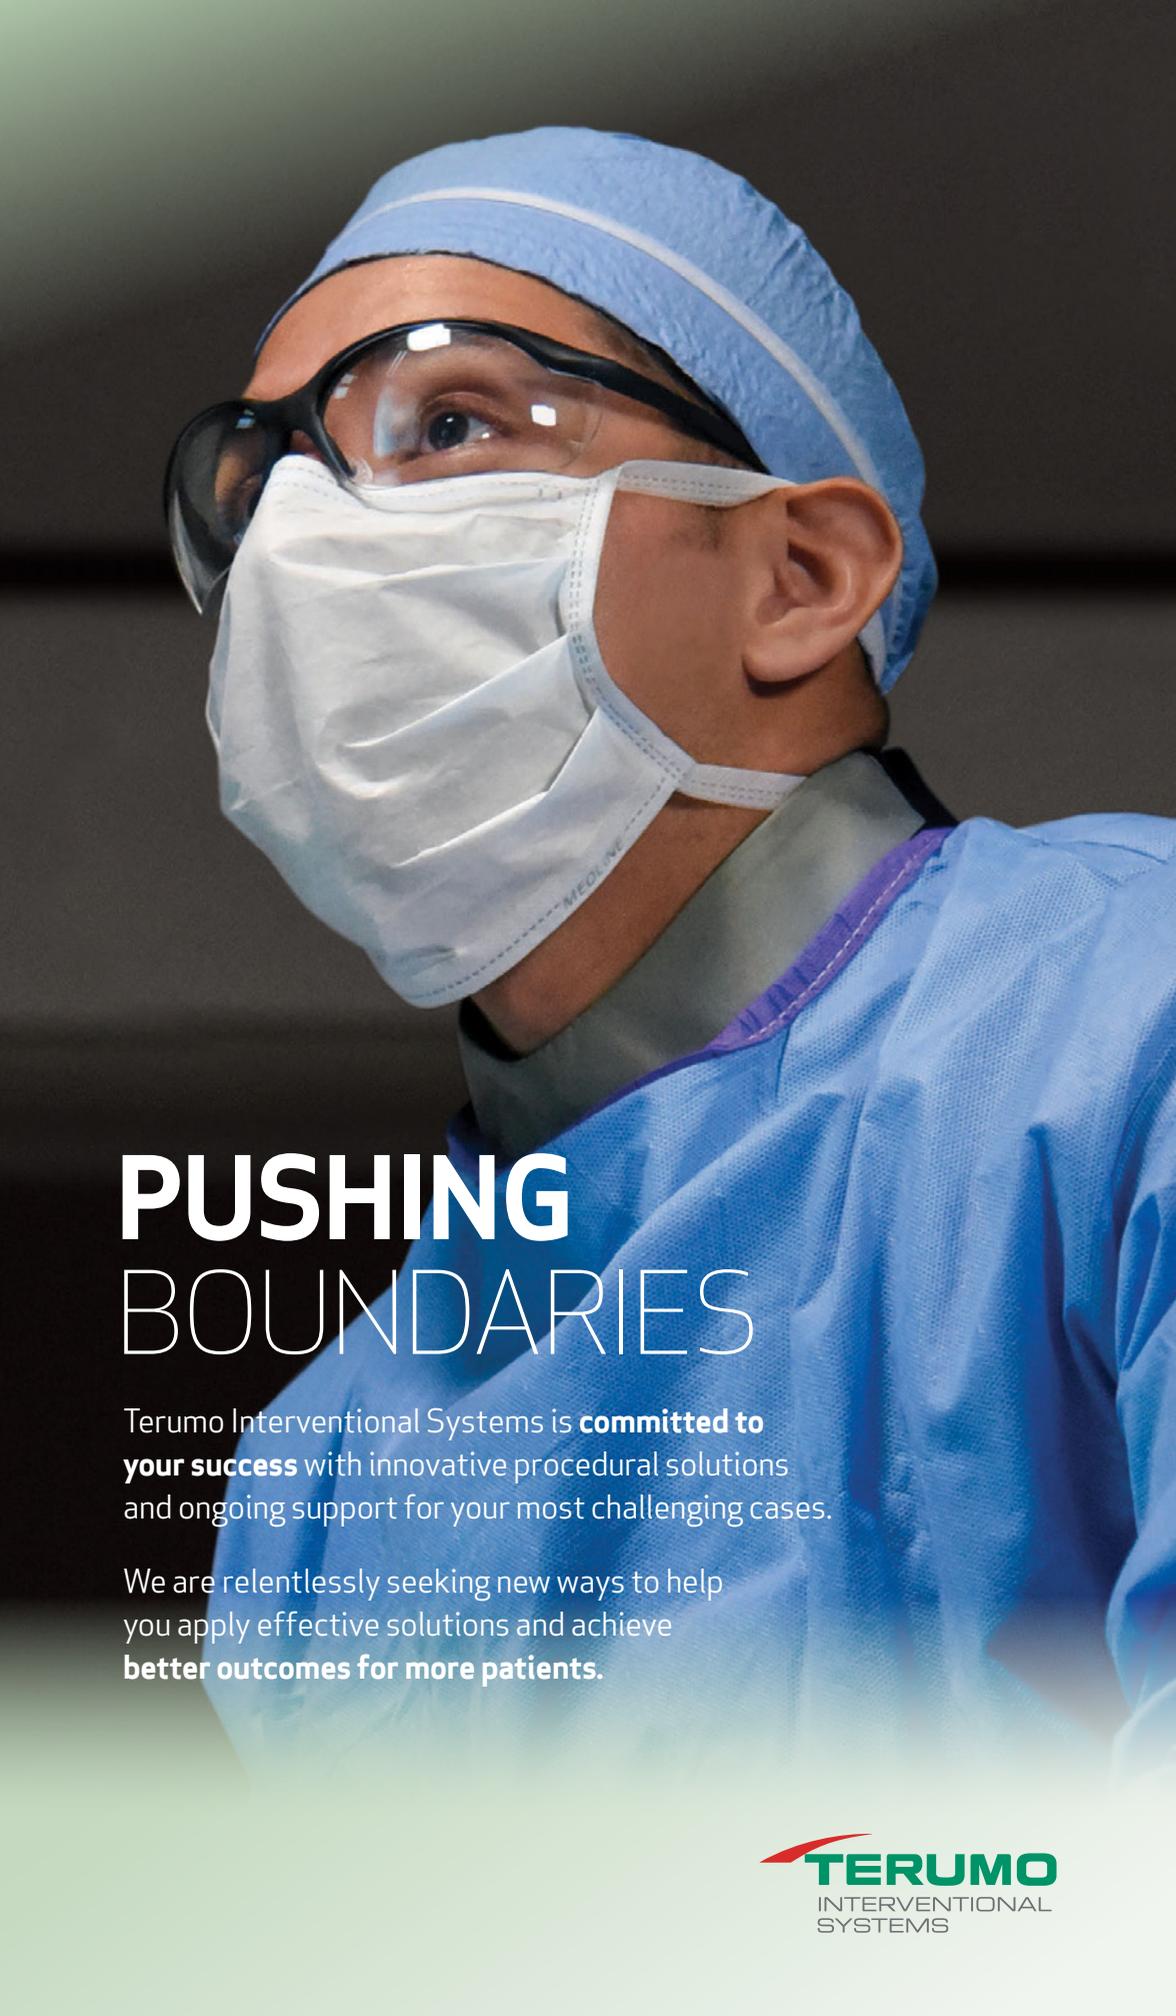

Radial Compression Device

THE CLEAR ADVANTAGE

#1 preferred and most used hemostasis device on the market¹

TERUMO
INTERVENTIONAL
SYSTEMS

PUSHING BOUNDARIES

Terumo Interventional Systems is **committed to your success** with innovative procedural solutions and ongoing support for your most challenging cases.

We are relentlessly seeking new ways to help you apply effective solutions and achieve **better outcomes for more patients.**

TR Band[®]

Radial Compression Device

THE **STANDARD** FOR RADIAL HEMOSTASIS

The preferred choice for radial hemostasis

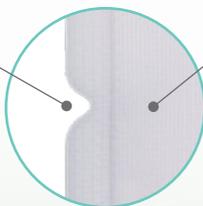

- Transparency ensures continuous observation of the access site
- Dual compression balloons provide precise compression of the radial artery without compromising local nerve structure²

An innovative design that makes it extremely easy to use

- Air titration provides a more precise way of applying pressure to the radial artery³
- Adjustable straps make application fast and simple — two band lengths provide a precise fit for optimal patient sizing²

Scalloped edges
designed to improve patient comfort.

Enhanced hook and loop coverage
designed to maximize secure attachment.

IMPROVED FEATURES

DELIVERING CELEBRATED PERFORMANCE

Consistent and controlled performance

- Allows less variability when incrementally titrating air from the device, resulting in maintenance of adequate blood flow in the radial artery⁴
- Achieves hemostasis at low pressures, minimizing the chances of applying occlusive pressures⁴

Improved balloon design
for better visibility of
green radial artery
marker.

Clip feature
secures inflation tube
to keep connector
from hanging.

Left and right hand marker
to apply band on accurate radial
access site, reducing operator
risk of misplacement.

Redesigned inflator tip
prevents misconnection
to Introducer sheath.
